

IPhoneLocator Installation Guide

- For Vera UI5 1.622
- November 15th 2013
- based on a version V1.60 installed from the application store
- @amg0
- User Guide documentation : <http://forum.micasaverde.com/index.php/topic,16907.0.html>

1	Install the Plugin from the application store	 <p>The screenshot shows the 'Install apps' interface. At the top, there are filters for 'Sorted' (By modified date), 'Category' (All categories), and a search bar. Below is a table of apps. The 'iPhone Detector Plugin' is highlighted, showing a price of \$0, a 5-star rating, version 1.60, and a modified date of 2013-11-14 15:06:40. An 'Install' button is visible next to the app entry.</p>
2	Wait while files are downloaded	 <p>The screenshot shows a blue progress bar with the text 'Luup : Downloading file: L_Iphone.xml'. There are up and down arrow icons on the right side of the bar.</p>
3	Wait until you get this message	 <p>The screenshot shows a blue message box with the text 'iPhoneLocator : apple device map is empty'. There are up and down arrow icons on the right side of the box.</p>
4	The plugin display in the Devices page should be	 <p>The screenshot shows the 'iPhoneLocator' interface. At the top, it says 'iPhoneLocator'. Below that, it says 'No Devices for this account, check network/credentials'. A distance of '5059.43 Km @ Fri Nov 15 19:49:06 2013' is displayed. There are several buttons: 'Present', 'Away', 'Refresh', 'Mute', and 'Unmute'. The version 'v1.60' is shown in the bottom right corner.</p>
5	Go into "Settings" tab for the device. You should see these values except the Home Lat , Home Long, which by default , should be your VERA declared location	 <p>The screenshot shows the 'Settings' page of the iPhoneLocator application. It has a navigation bar with 'Control', 'Map', 'Settings', 'Advanced', 'Logs', 'Notifications', and 'Save'. The 'Settings' page contains various configuration fields: <ul style="list-style-type: none"> iCloud Email: noname@dot.com iCloud Password: [empty] Show: [checkbox] Pattern: [empty] iPhone Name: [empty] Refresh: [button] Poling period: 60 Dynamic: [checkbox] Map: [empty] Home Lat: 45.167 Home Long: 5.717 Home Range: 0.2 Unit: Kilometer Addr Format: [empty] </p>

<p>6</p> <p>Type your iCloud email and password and leave the password field (with the tab keys or with a mouse click)</p> <p>Everytime you change your password and leave the field (with the tab keys or with a mouse click) it will go and refresh device name list from the iCloud information. An empty list is a sign of wrong email or wrong password or no internet connection !</p>	
<p>7</p> <p>You should see this button “refreshing...” while the device is contacting iCloud to find your device names</p>	
<p>8</p> <p>Then if email + pwd is correct you should see the pick-list of devices from your iCloud account. Pick one and click on the “→” button to transfer it into the list of selected devices you want to track</p> <p>Selected devices or pattern matchin should end up in the right hand list (selected list). You can delete from that list with the “X” button</p>	 <p>Or use pattern matching like “.*” to get tracking for all devices in your account:</p> 
<p>9</p> <p>Change your other parameters as you want. Refer to the documentation available at :</p> <p>http://forum.micasaverde.com/index.php/topic,16907.0.html</p>	
<p>10</p> <p>Click on the Save Needed button, it will turn Green while saving then back to normal blue.</p>	

11	Close the device window and check the display in the DEVICE page	
12	Force a refresh and see it being updated for the first time. Notice the icon telling you the device is approaching (the default pole north location was probably further than your new configured home location)	
13	After a while (depending on your polling settings) it will refresh and show a stable icon most likely	
14	The map setting page should now work	
15	You can create scene, PLEG or simple device notifications
